ONTARIO MINISTRY OF THE ENVIRONMENT
WASTE DISPOSAL SITE INVENTORY

EXECUTIVE SUMMARY

This document contains an updated list, prepared by the Ministry of the Environment, of all known active and closed waste disposal sites in the Province as of December 1987. The document is divided into an active site inventory, listing 1395 sites; a closed site inventory, listing 2455 sites; and a closed municipal coal gasification plant site inventory, listing 41 sites. For each site, information is provided on waste types, site locations and, in the case of closed sites, the year of closure. The coal gasification plant site inventory, not included in the original inventory document published in July 1986, lists newly-identified sites where coal tar waste may be present. As with the original list published in 1986, this updated version is a working document subject to continual revisions and updating.

The gathering and assembling of information required for the inventory is a major part of the Ministry's long-term, comprehensive program to investigate and monitor waste disposal sites throughout the Province. The information sources include the Ministry's computerized data files on individual sites, file archives, and field inspections of the sites.

Many of the sites listed in this document were closed prior to the enactment of legislation in 1971 requiring the issuance of a Certificate of Approval for the operation of a waste disposal site. As a result, these older, closed, uncertified sites are not accompanied by the same level of information regarding such things as waste type and physical setting. Much additional work is required to ensure that essential and uniform information is available for all waste disposal sites in the Province.

As a means of developing an orderly approach to the investigation of all sites, an internal Ministry waste disposal site classification scheme has been developed. This classification system (detailed in Appendix A) identifies two basic types of sites:

1) sites deemed to have the potential to have an impact on human health ("Class A" sites) and;

2) sites deemed to have the potential to impact the environment in general ("Class B" sites).

Further subdivisions of each class (A1, A2...; B1, B2...) reflect site-specific waste characteristics as detailed in Appendix A. The classification system serves only to group the sites, based on available information, into classes to ensure the systematic Ministry investigation of all sites. It does not intend, nor can it be assumed, to classify the sites according to actual impacts or hazards.

Based on the 1986 classifications, investigations were undertaken in 1986 at all Class A1, Class A2 and Class A3 closed waste disposal sites. As these investigations proceeded, new and more detailed information necessitated an updating of the original inventory. Locations, waste types and closure dates on the Class A1, A2 and A3 sites have all been verified and corrected as necessary. In many cases it was discovered that the original classification did not accurately represent the true nature of a site and a new classification was assigned to these sites. The revised classification of the A1, A2, A3 sites serves to describe the actual characteristics of the site for quick reference and does not imply actual impacts or hazards. Further detailed field investigations are being undertaken at some of these sites to determine if actual impacts are present or may occur in the future, and action will be taken accordingly by the Ministry at these sites.

The active and closed waste disposal site inventories are continually being updated and verified. In many cases certain pieces of information, denoted by "NAV" in the listings, were not available at the time of this publication. Where information is missing, as for example lot and concession numbers or a municipality name, every attempt will be made to incorporate this data into future inventory listings. Much of northern Ontario has not been organized into legal townships or other municipal entities. In these cases, the municipality of the site has been indicated by naming a geographic feature of local significance such as a lake or river.

The approximate locations of all active and closed waste disposal sites are shown on maps located at the back of the report. A separate map shows the approximate locations of former (municipal) coal gasification plant sites. The purpose of these maps is to provide general locations of waste disposal sites throughout southern and northern Ontario. If more accurate site locations are necessary, this information is available from local Ministry district or regional offices shown on the map in Appendix B

Because of the small scale of the maps, it has not been possible to avoid conjested areas where many sites are located in a small area. These areas usually occur in cities.

MINISTÈRE DE L'ENVIRONNEMENT DE L'ONTARIO
INVENTAIRE DES DÉCHARGES

SOMMAIRE

Le présent document donne une liste à jour des décharges actives et des décharges fermées de la province dont le ministère de l'Environnement avait connaissance au mois de décembre 1987. Il énumère tour à tour les décharges actives, au nombre de 1396, les décharges fermées, au nombre de 2477, puis les usines municipales de gazéification du charbon, toutes fermées, au nombre de 41. Pour chacune des installations, il présente le genre de déchets, l'emplacement et, dans le cas de celles qui ne sont plus en activité, l'année de fermeture. L'inventaire des usines de gazéification du charbon, qui ne figurait pas dans l'inventaire original de juillet 1986, détaille les installations, identifiées depuis, qui sont susceptibles de receler des résidus de goudron de houille. Cette mise à jour, à l'instar de la version de 1986, se veut un simple document de travail qui sera revu et corrigé continuellement.

La collecte et la compilation des renseignements nécessaires à la réalisation de l'inventaire constituent un élément important du programme global à long terme dont le ministère s'est doté pour les enquêtes sur les décharges ainsi que la surveillance de celles-ci. Ces renseignements proviennent tantôt des données informatisées que le ministère tient sur chacune, tantôt des archives, tandis d'inspections sur le terrain.

Beaucoup des installations répertoriées ont fermé leurs portes avant l'adoption, en 1971, de la loi qui obligeait désormais les exploitants d'une décharge à obtenir un certificat d'autorisation. Aussi ne possédons-nous pas autant de renseignements sur le genre de déchets que produisaient ces installations anciennes, pas plus que sur leur aménagement. Il nous reste encore beaucoup à faire avant de disposer des renseignements essentiels qu'il nous faut sur toutes les décharges de la province.

Le ministère, soucieux d'uniformiser ses enquêtes, a élaboré une classification interne des décharges. Cette classification, décrite à l'annexe A, englobe deux genres d'installations :

1) celles susceptibles d'avoir des répercussions sur la santé humaine (décharges de la classe «A»); et

2) celles susceptibles d'avoir des répercussions sur l'environnement en général (décharges de la classe «B»).

Chaque classe a été subdivisée en sous-classes (A1, A2...; B1, B2...) pour mieux tenir compte de la diversité des déchets que produisent les diverses décharges, comme le montre l'annexe A. Cette formule nous permet de regrouper les installations en

fonction des renseignements à notre disposition et, partant, de systématiser les enquêtes. Elle ne peut servir, toutefois, à classer les décharges suivant les incidences ou les risques qu'elles présentent.

En 1986, à partir des classifications établies cette année-là, nous avons mené des enquêtes sur l'ensemble des décharges fermées des classes A1, A2 et A3. Au fur et à mesure que nous avançions, nous avons recueilli des renseignements nouveaux et détaillés qui nous ont obligés à mettre à jour l'inventaire original. L'emplacement des installations des classes A1, A2 et A3, le genre de déchets qu'on y trouve ainsi que leur date de fermeture ont été vérifiés et rectifiés, le cas échéant. Dans de nombreux cas, nous avons constaté que la classification initiale de la décharge n'était pas juste, et il nous a donc fallu la modifier. La classification des installations de ces catégories donne un aperçu rapide des caractéristiques des diverses décharges, sans se soucier des incidences ou des risques. Précisons cependant que nous procédons actuellement à des enquêtes plus poussées sur le terrain à quelques endroits en vue de déterminer si des incidences réelles sont présentes ou sont susceptibles de survenir à l'avenir. Une fois ces enquêtes terminées, le ministère prendra les mesures qui s'imposent.

L'inventaire des décharges actives ou fermées sera continuellement revu. Dans bien des cas, certains éléments d'information n'étaient pas connus au moment d'aller sous presse. Nous nous efforcerons d'intégrer les renseignements manquants, tel numéro de lot ou de concession ou encore tel nom de municipalité, dans nos listes futures. Une grande partie du nord de l'Ontario n'a pas été regroupée en cantons ou en d'autres entités municipales. Ici, nous avons rattaché la décharge à une particularité géographique d'intérêt local, comme un lac ou une rivière.

L'emplacement approximatif des décharges actives et des décharges fermées figure sur des cartes que le lecteur pourra consulter à la fin du rapport. Une carte distincte indique l'emplacement des anciennes usines municipales de gazéification du charbon. Nous avons voulu donner une idée <u>générale</u> des endroits où se trouvent les décharges dans le sud et le nord de l'Ontario. Pour obtenir des renseignements plus précis, il suffit de communiquer avec l'un des bureaux de district ou des bureaux régionaux du ministère qui sont illustrés sur la carte reproduite à l'annexe B.

Comme les cartes ont été réalisées à une échelle réduite, nous n'avons pas pu éviter les zones petites, mais à forte concentration de population, où beaucoup des décharges sont situées. Ces zones se trouvent habituellement dans les grandes villes.

ACTIVE WASTE DISPOSAL SITE INVENTORY

ACTIVE WASTE DISPOSAL SITE INVENTORY
LEGEND

MAP ID NO

The identification number of a site shown on a location map in the back of the report. The sites in each "County" are numbered from "1" to whatever number of sites there are in that County. Therefore reference to a site on the map must name the "County" name and the "map id no", e.g. "Oxford County, site number 5". Those sites identified by an asterisk (*) could not be plotted on the accompanying location maps because their precise locations have not yet been verified. This will be done in future updates of the report.

SITE NO

All sites that are approved for operation in the Province by the Ministry are assigned a Certificate of Approval number. The site number is the same as the Certificate of Approval number.

COUNTY

Name of the County, Regional Municipality, or District where the site is located.

MUNICIPALITY

Name of the city, town, village or other incorporated municipality where the site is located.

LOT NO

The number or name of the lot in the concession where the site is located.

PT	= part
SW1/2	= southwestern half of ...
LT	= lot
PT14 N1/2	= part 14 north half (north half of part lot 14), etc.
NAP	= not applicable
NAV	= not available
UNSURVE	= unsurveyed
NAME	= A, A-B, Gore A, Range B &C, etc.
DIV	= Division

CONCESS

The number or name of the concession where the site is located. The following have been abbreviated:

EMR	=	East Mitchell Road
SWR	=	South West Range, etc.
UNSURVE	=	unsurveyed
NAP	=	not applicable
NAV	=	not available
SECT	=	Section

NTS

The National Topographic System map number on which the site is located.

D

Domestic waste

C

Commercial waste

O

Other waste

H

Hazardous waste

L

Liquid waste

NH

Non-hazardous solid industrial waste

SS

Sewage sludge

Numbers under waste types are percentages of that particular waste received by the site. NAP (not applicable) refers to waste types for which the site was not certified or approved to receive. Where waste types and percentages are missing, it is because this information was not available at the time of the survey. This information is being collected.

ST

Site Status:

1 = active site; a site that is approved to receive and is receiving waste

3 = inactive site; a site that is approved to receive but at this time does not receive any waste

CL

Site classification indicates the potential health and/or environmental impact of the site according to the scheme indicated in Appendix A. When the site classification is missing, it is because there is insufficient information at the present time on site location or waste type to classify the site. This information is being collected on an ongoing basis as described in Appendix A.

CLOSED WASTE DISPOSAL SITE INVENTORY

CLOSED WASTE DISPOSAL SITE INVENTORY
LEGEND

MAP ID NO

The identification mumber of a site shown on a location map in the back of the report. The sites in each "County" are numbered from "1" to whatever number of sites there are in that County. Therefore reference to a site on the map must name the "County" name and the "map id no", e.g. "Oxford County, site number 5". Those sites identified by an asterisk (*) could not be plotted on the accompanying location maps because their precise locations have not yet been verified. This will be done in future updates of the report.

SITE NO

Site identification number.

COUNTY

Name of the County, Regional Municipality, or District where the site is located.

MUNICIPALITY

Name of the city, town, village or other incorporated municipality where the site is located.

LOT NO

The number or name of the lot in the concession where the site is located.

PT	=	part
SW1/2	=	southwestern half of ...
LT	=	lot
PT14 N1/2	=	part 14 north half (north half of part lot 14), etc.
NAP	=	not applicable
NAV	=	not available
UNSURVE	=	unsurveyed
NAME	=	A, A-B, Gore A, Range B & C, etc.
DIV	=	Division

CONCESS

The number or name of the concession where the site is located. The following have been abbreviated:

EMR	= East Mitchell Road
SWR	= South West range, etc.
NAP	= not applicable
NAV	= not available
UNSURVE	= unsurveyed
SECT	= Section

NTS

The National Topographic System map number on which the site is located.

DATE CLOSED (YYYYMMDDorYYYY)

The date the site was closed and/or stopped receiving waste.

CL

Site classification indicates the potential health and/or environmental impact of the site according to the scheme indicated in Appendix A. When the site classification is missing, it is because there is insufficient information at the present time on site location or waste type to classify the site. This information is being collected on an ongoing basis as described in Appendix A.

APPENDIX A

WASTE DISPOSAL SITE CLASSIFICATION SCHEME

Appendix A:

Waste Disposal Site Classification Scheme

The classification system is based on the following assumptions:

1. Waste at all disposal sites have the potential to produce leachate; leachate can contaminate ground water, streams and lakes. Methane gas can also be produced and can pose an explosion hazard. However, because of natural dilution or the natural attenuation capacity of soils, or due to engineering facilities built into landfills, impacts on humans or the environment may not be detectable at a point of concern.

2. In general, industrial liquid/hazardous waste, because of the highly toxic nature of some of these wastes, are of greater concern than domestic/municipal wastes.

3. For domestic/municipal wastes, the date of closure of the site is important since the rate of leachate and gas production declines with the age of the landfill. For industrial liquid/hazardous waste, because of the high initial concentrations and often low solubilities, leachate and gas production can be maintained at levels of concern for a longer period of time.

4. Waste disposal sites in urban areas are of concern because of the high development density often found around the sites and, if this development doesn't exist, the high potential for future urban encroachment onto the adjacent lands. Waste disposal sites in rural areas are of concern due to the potential for contamination of domestic water supplies.

5. If a domestic/municipal landfill has been closed for at least ten years, and there have been no methane-related concerns, then it is assumed that, unless the site's environment is significantly changed by development, these concerns will not arise in the future.

6. If the material beneath and surrounding a landfill is highly permeable, ground water contamination is of concern; if the material below and surrounding the site is fairly impermeable, surface water contamination is of concern.

All known active or closed waste disposal sites in Ontario have been classified using the same basic criteria in which the waste type and site location determine the classification of a site. "Class A" sites are those that are deemed to have the potential to impact human health because of the proximity to human development; "Class B" sites are those that are deemed to have the potential to impact mainly the environment.

In order for a waste site to be classified, its location must be known. The precise locations of some very old sites are approximate. Once the location of the site is known, it can be determined whether any of the A criteria (accompanying the classification table) apply. From this it can be determined whether the site is a "Class A" or a "Class B" site. If a site is not a "Class A" site, it is automatically a "Class B" site. In only a few cases, the accurate locations of sites are not known and classification is not possible. Further work is on-going to locate these sites.

To further classify the site to 1, 2, 3, etc. (as in Class A1, A2, A3, etc.) the type of waste must be known. At the present time there are many old, closed waste disposal sites for which this is not known; these are therefore classified only as "A" or "B". It will take considerable effort and financial resources to determine the waste type in these sites.

SITE CLASSIFICATION CRITERIA

(TO ACCOMPANY TABLES I & II)

"CLASS A" CRITERIA - HAZARD TO HUMANS

THESE CRITERIA, SINGLY OR IN COMBINATION WITH OTHERS, INDICATE THE HIGHEST HAZARD TO HUMANS; FURTHER INVESTIGATIONS MAY BE WARRANTED TO DEFINE PRECISELY THE HAZARD(S) AND TO DETERMINE ACTIONS NECESSARY IN THE FUTURE.

- EXISTING DWELLING/STRUCTURE (WITH OR WITHOUT WELL) ON SITE
- PRIVATE WELL < 1000 m FROM SITE
- MUNICIPAL WELL < 1000 m FROM SITE
- PERENNIAL STREAM ON SITE OR WITHIN 1000 m FROM SITE AND THERE IS KNOWN DOMESTIC CONSUMPTIVE OR IN-STREAM USE OF STREAM WATER WITHIN 5 km DOWNSTREAM
- LIKELY FUTURE DEVELOPMENT OF LAND IN URBAN AREA OR IN DEVELOPED RURAL AREA
- SIGNIFICANT AQUIFER AT SURFACE OR WITHIN 10 m OF SURFACE AND GROUND WATER MOVEMENT IS DOWNWARD
- PAST PROBLEMS AT SITE

THE FOLLOWING SUPPLEMENT THE FOREGOING CRITERIA AND SHOULD BE NOTED FOR EACH SITE. THEY SHOULD NOT BE USED BY THEMSELVES TO CLASSIFY A SITE AS A "CLASS A" SITE.

- EASY PUBLIC ACCESS TO WASTE OR SITE
- EXISTING MONITORING FOR METHANE GAS, SURFACE OR GROUND WATER
- LANDFILL AREA > 1 ha

"CLASS B" CRITERIA - HAZARD TO ENVIRONMENT

A SITE THAT DOES NOT SATISFY ANY OF THE "CLASS A" SITE CRITERIA IS AUTOMATICALLY A "CLASS B" SITE. THIS CLASSIFICATION INDICATES GENERALLY A LOW POTENTIAL FOR IMPACT ON HUMANS AND FURTHER INVESTIGATIONS REGARDING THESE IMPACTS ARE NOT AS URGENT AT THESE SITES AS AT THE "A" CATEGORY SITES. HOWEVER, THE HAZARD TO THE ENVIRONMENT MAY STILL BE HIGH AND FURTHER INVESTIGATIONS MAY BE NECESSARY TO DEFINE THIS HAZARD.

TABLE I: ACTIVE WASTE DISPOSAL SITE CLASSIFICATION

	INDUSTRIAL LIQUID/ HAZARDOUS WASTES		MUNICIPAL/DOMESTIC WASTES	
	URBAN	RURAL	URBAN	RURAL
"CLASS A" CRITERIA (HUMANS)	A1	A2	A3	A4
"CLASS B" CRITERIA (ENVIRONMENT)	B1	B2	B3	B4

TABLE II: CLOSED WASTE DISPOSAL SITE CLASSIFICATION

	INDUSTRIAL LIQUID/ HAZARDOUS WASTES		MUNICIPAL/DOMESTIC WASTES					
	URBAN	RURAL	URBAN			RURAL		
			YEARS CLOSED					
			<10	10-20	>20	<10	10-20	>20
"CLASS A" CRITERIA (HUMANS)	A1	A2	A3	A5	A7	A4	A6	A8
"CLASS B" CRITERIA (ENVIRONMENT)	B1	B2	B3	B5	B7	B4	B6	B8
N P	NO POTENTIAL FOR IMPACT ON HUMANS OR THE ENVIRONMENT
